Actually, it extended farther back into '75, and was nearly all of '77 (at

least). I got this call in July '77, and was nowhere near the end of the program.

>Check out KOPP whose last name is KOPP..

Hm. I bet there aren't many cases like that...

FIELDORG@ARRL.org Frequently Asked Questions (FAQ) List

Revised: Nov. 1, 1993

What is FIELDORG?

FIELDORG@ARRL.org is an electronic mail reflector dedicated to hams interested in any and all types of ARRL Field Organization matters.

This is an EXCELLENT method of utilizing your already-existing Email capabilities for discussing Amateur Radio activities relating to the Amateur Radio Emergency Service, ARRL National Traffic System operation, the Amateur Auxiliary to the FCC's Field Operations Bureau, etc. It's also a superb way of keeping in touch with the many thousands of others who are interested in the organizational aspects of the ARRL, including Section Managers, Section Emergency Coordinators, DECs, ECs, Bulletin Managers, Technical Coordinators, Section Traffic Managers, Official Relay Stations, Official Observers, State Government Liaisons, Technical Specialists, Volunteer Counsels, Volunteer Consulting Engineers, Affiliated Club Coordinators, ARRL Affiliated Club Presidents and other club officials, and Public Information Coordinators/Officers.

Each message you send to FIELDORG@ARRL.org will be sent out to all the other subscribers, kinda like a 2-meter repeater that has a coverage radius of 12,000 miles or so! Think of sending mail to the list as the equivalent of an ANNOUNCE/FULL message on PacketCluster. Of course, you can continue to use regular email to send messages to specific individuals as you no doubt already do. But you're certainly not required to; one of the really slick things about

a reflector like this is that you can simply "read the mail" and never contribute -- although we certainly hope you WILL chime in at frequent and regular intervals.

Electronic mail is different from packet radio, in that many subscribers receive their email through commercial services such as CompuServe, MCImail, BIX, GENie, America On Line, and others. And the Field Organization reflector enhances those e-mail capabilities even further.

Now let me provide you with a list of a few of the benefits that you'll immediately begin enjoying, once you subscribe (no charge, of course!) to FIELDDORG@ARRL.org:

1. All W1AW bulletins -- straight from the horse's mouth, so to speak. Bulletin Managers and Official Bulletin Stations, take note!
2. Prompt, reliable, and accurate communications with other ARRL Section Managers, their staffs, their appointees, and -- well, let's face it, EVERYBODY who participates in the FIELDDORG reflector...
3. The ARRL Letter. No, you won't get it as fast as those who pay for it, but you'll get it shortly thereafter, certainly. And it's an excellent way for club newsletter editors, Public Information Coordinators, and PIOs to keep abreast of the hottest ARRL topics.
4. Section Leader and Field Forum newsletters. In these two cases, you'll not only get it FASTER than those who get it by Snail Mail, but you'll have it in ASCII format so that you can utilize any or all of it for your own newsletters, club talks, and teaching efforts.

In order to minimize spurious messages, follow the operating hints detailed below.

How do I join FIELDDORG?

Send subscription requests, unsubscription requests, change of e-mail address requests and questions of an administrative nature **only** to LHURDER@ARRL.org. Send messages to be broadcast to **all** net members to FIELDDORG@ARRL.org.

What are the suggested "operating practices" for FIELDDORG?

Put your name and call sign on every message you send. We don't all know everyone by just a call or a nickname.

Use a subject line that indicates the true subject of your message.

Eschew flamage. If someone sends a flame to the list and you can't bite your tongue, (or your keyboard!) send your flaming reply directly back to the flaming individual, not back to the list. Treat flamers the way you would 2-meter repeater jammers - ignore them.

Make sure there is something of value in each message you send to the list. PLEASE avoid messages that are a complete reprint of someone else's message, with nothing but "I agree" or "Me too" added to the bottom -- not much value there, and it angers some participants to boot. When following up to someone else's message, be sure to include ONLY the essential pieces of thread of the note. Do NOT include those 20 extra header lines that your mail gateway tacked onto the original message.

How can I find out more about the Internet?

Pick up a copy of the book The Internet Companion by Tracy LaQuey, Addison-Wesley, ISBN 0-201-62224-6. If your local technical book store doesn't carry it, you can order from Computer Literacy, 2590 North First Street, San Jose, CA 95131. Their phone number is 408-435-0744.

A reminder to all that the American Radio Relay League continues to make available to Amateur Radio Operators and non-amateurs alike a wide variety of free materials and services. Of particular interest to the not-yet-licensed individual would be the ARRL Prospective Ham Package. In the PHP, one would find:

-

1. Printouts of Volunteer Examination session

opportunities in his/her area.

-

2. Listings of Amateur Radio clubs in his location.

-

3. Helpful promotional material about the Amateur Radio Service.

-

The already-licensed individual might well be interested in another free ARRL publication, the ARRL Public Service Communications Manual. The PSCM represents the "bible" of public service communications, and clearly/concisely points out how the ARRL National Traffic System and the ARRL Amateur Radio Emergency Service function as a cohesive unit to provide the maximum support to the public both in times of disaster as well as "normal" times.

-

To obtain any of these free ARRL services, please provide me with:

-

A. Your name

B. Your postal mailing address

C. A Specific request for either of the two services above.

-

I have an HTX 202 and also like it for the same reasons you do. As to
ruggedness, I heard an interesting story on a local repeater. The operator
dropped it (presumably only 3-4 feet) and said that he had to have the
"receive coils realigned" because it was off-frequency after the drop.
This is the first story like this that I've heard, most others were
descriptions of the 202's ruggedness (for example: talked with a guy who
dropped his off of a roof: only damage was a split rubber duck antenna
which RS replaced for free). Has anyone else heard of receiver alignment
problems after rough handling or a drop?

>>Here is a quote from a recent magazine article about antenna tuners:
>>"... it (the antenna tuner) also tunes out all mismatches in the system,
>>including transmission line to antenna mismatch, and also any non-
>>resonance in the antenna itself."
>>Question: Is the meaning clear and if so, what is the meaning?
>The meaning is clear. The meaning is that the author hasn't got a clue as
>to what he or she is talking about.

Having not seen the article, I don't know what the context was; if the author

wasn't claiming that the antenna "tuner" fixes up the mismatch *on the transmission line*, but just makes sure the transmitter sees a pure 50-ohm load, then my comment there was incorrect. If the author claimed that the tuner could cause the SWR to be 1:1 over the entire length of coax, he's dead wrong. (Unless, of course, the tuner is *at* the antenna.)

As I said:

>_Reflections: Transmission Lines and Antennas_, by Walt Maxwell (\$20 from the >ARRL). Buy this book. Live it.

Subject: MFJ 1278 and Drake TR-4
To: info-hams@ucsd.edu

I have a Drake TR-4 and an MFJ 1278 that I use together on RTTY. The cable that goes into the mic jack from the 1278 has to be manually unplugged each time I go to receive because there seems to be something keying the Drake even though the 1278 is in receive mode. I've double checked the cable for the obvious shorts. This makes HF AMTOR or Packet operation impossible. MFJ was unable to provide assistance. Please reply via info-hams or to me directly at steve_egert@dgc.ceo.dg.com.

To: info-hams@ucsd.edu

Interested in the Amateur Radio Service, but don't know where to turn to locally for assistance?

Well, one of the very best ways to get a local helping hand is to establish a relationship with your local Amateur Radio club. And most areas of the country have more clubs than you'd think possible.

Ah, but the eternal question is always "Say, just how DO I contact an Amateur Radio club near me?"

Well, folks, do I have a deal for you!

For the price of a message to me here at ARRL HQ,
(SEEMS cheap enough!) and a specific request, I can get
you listings of more clubs than you'd ever want to visit.

To make it happen, please send me a message with your
name, your mailing address, and a specific request for the
Amateur Radio clubs in your area. I'll get them right out
to you.

And for those of you who are already licensed radio
amateurs, remember, your local clubs represent an ENORMOUS
resource for you.

Having trouble with TVI or local ordinances that
affect your capability to serve the public by way of your
Amateur Radio license? Interested in finding someone to
assist with a tower installation? Need to locate a
kindred spirit that understands YOUR concerns about
Amateur Radio satellite operation or digital networking
via Amateur Radio? Chances are that someone in your club
can help.

Another free service, brought to you by the world's
largest support organization for the Amateur Radio Service

-- the American Radio Relay League.

Subject: RECIPOP info available
To: info-hams@ucsd.edu

Yet another of the many free services that ARRL HQ offers is the
ability to obtain Reciprocol Operating permit information.

Matter of fact, ARRL HQ is the ONLY place on the planet where
this information resides!

"Awrite, already" sez you, "why would I ever want one, and how
much are ya gonna burn me to GET one?" "Glad you asked!" sez I

Radio amateurs are a constantly-travelling, very mobile, bunch
of folks, it appears, and their travels clearly take them to
countries near and far. Myself, I prefer "far" rather than 'near',
but if you're inclined to travel to Canada, you can ignore this whole
tome, as the Canadian government and our own here in the States have
worked out an automatic-reciprocity agreement.

But if Belize is on your itinerary perhaps, or any of the other many countries with whom we share a reciprocal operating agreement, you're in luck! Many foreign administrations DO allow U.S. Amateur Radio licensees to apply for a reciprocal operating permit, and you need but ask us for the complimentary package that we make available.

To make your trip more enjoyable in that regard, we need:

1. Your name
2. Your POSTAL mailing address
3. A specific request for the RECIPOP package for the specific country you'll be off to.

Because if they mounted those huge whips on the top they'd hit every highway overpass in the country. As I said, *when mechanically feasible*, the best place to mount an antenna is in the center of the roof.

>Rod NONZO

It seems that if ARRL wants to maintain its privileged (non-profit,
educational; VEC, etc) status it is going to have to conform to the
prevailing standards of non-discrimination.

If some members want to exclude a minority the management may, or course,
try to accommodate those members. If they want to push the limits of
discrimination though, they'll just have to live with the idea that the
organization will incur a cost when those they injure avail themselves of
government process to seek redress.

At bottom, the problem is the desire on the part of _some_ members to exclude _some_ fellow hams. So your proposed quitting is probably best - if ARRL is to continue as a public organization and you can't stand equal participation by all. Of course, the membership could also remove ARRL from its public status and make it a private (taxpaying, etc.) organization. Then they would be more, but not absolutely, free to discriminate as you like. The choice is ours, but we can't have it both ways.
